JUNIPERUS pfitzeriana Kallay's compacta is an evergreen that everyone has been looking for. It has all the qualities of the well known Pfitzer's juniper—light gray green foliage, smoke and disease resistance, perfectly hardy, and easily transplanted. In addition it grows in a compact form.

Instead of having irregular broad branches that tend to grow upwards, leaving the center low as the ordinary Pfitzer's juniper, it sends out small regular branches that are full

clear to the ground with a full center. As the ordinary Pfitzer's juniper gets old it tends to get "leggy." This new variety remains always bushy and compact.

It can be used in formal planting as a globe type of evergreen, as a hedge, or in informal planting as a facer to higher evergreens or deciduous planting.

It is an excellent evergreen for house foundation planting or in masses for park effect. It is the favorite Pfitzer's juniper PLUS.
